

Testimonial

Sergey Gavrin

Deputy Director General of Genenergomontazh, LLC (now)
Chief Mechanical Engineer of Achinsk Refinery (until 2014)

The COMPACS system was implemented at the Achinsk Refinery as one of the first such systems at a downstream industry. Thanks to that system the Refinery switched to condition-based maintenance of machinery, and that considerably reduced the number of unplanned repairs. Today, we plan to implement the systems at all the facilities under construction right now. I wish DYNAMICS SPC good fortune and developing this system further, especially with their high scientific potential. And I recommend all mechanics to implement their systems to their plants.
