

Testimonial

Albert Aktuganov

Chief Mechanical Engineer
of Angarsk Petrochemical Company Refinery, JSC (1996)

Angarsk Refinery was the second refinery (after the Omsk Refinery) to implement the COMPACS system. They began implementing it in 1995. Firstly, it allowed them to sensitize technological and maintenance personnel to high-quality maintenance and repair of machinery. And, secondly, to ensure the safe operation and detection of the cause of failure. After repair, the machines were not allowed to be put into operation if their state was “red” or “yellow”. I’m glad that there are such companies in Russia as DYNAMICS SPC. I want to thank Vladimir Kostyukov for our cooperation and congratulate DYNAMICS SPC on its Anniversary – 25 years. I wish it success, and to reach its creative goals, and to work for the welfare of Russia and DYNAMICS SPC itself.
