Oleg Kuznetsov

Chief Mechanical Engineer of Vyksa Steel Works, JSC

Warm greetings to DYNAMICS SPC! We have known each other since 2004. Our collaboration started to take place in a wheel-rolling shop. We mounted the stationary diagnostic system to a wheel-rolling mill. After that project, the mill reached a stratospheric levels and overfulfilled all plants for production. A leading part in that success was played by the diagnostics which allowed us to avoid any serious accidents in such parts of the wheel-rolling mill, as shafts, conductors and drives. I wish the company dynamic growth and prosperity, and at this time we are extremely eager to cooperate, because prognostic services today are the most important element of machinery reliability.
