

Testimonial

Sergey Samkov

Deputy Director General
of Gazpromneft-Omsk Refinery, JSC

All the achievements of DYNAMICS SPC are closely connected and were brought to life on an experimental basis - at Omsk refinery plants. Today, about 10 facilities and plants are equipped with the COMPACS vibration diagnostic system combined together with the COMPACS-Net diagnostic network.

I would like to wish DYNAMICS SPC further development, never stopping on its search for new technologies, to be in the forefront of the trends which are getting more and more significant in the course of the import substitution policy.

And also, to increase its demands on reliability and accident-free operation of not only the refinery industry, but all technology-related productions.
