Oleg Belyavskiy

Director General of Gazpromneft-Omsk Refinery, JSC

Back in 1990 we made a decision to implement a new promising invention - the COMPACS system for vibration diagnostics of pumps at a solvent deasphalter unit, just to try it out. Within a year the system showed a great performance and prevented several failures. Our specialist mechanics loved the system as it allowed them to determine problems and prevent them. Today we can't imagine our facilities without the COMPACS system. The new facilities designed today in our enterprise are commissioned with the complete system package which provides full reliability of the facility.
