

Testimonial

Dmitriy Melchakov

Deputy Director General of Achinsk Refinery

Our refinery implemented our first COMPACS systems at the Isomerization plant and CDU combined units (LK6). Vibration diagnostic systems successfully implemented in the Achinsk Refinery allowed us to get the information on the machinery state on time, and make adequate decisions on decommissioning the machinery for repair and possibility of its further operation. The main point is - the system allowed us to quit preventive maintenance and switch to condition-based maintenance.
